SYMBIOTIC TECHNOLOGY

STEAMBOX "M" offers two methods of generating steam: boiler-generated and instant mode. Working in synergy, these two methods make it possible to gain the maximum advantage from the two individual systems and overcome their limitations. These advantages are easy to measure in terms of speed, efficiency, energy-saving and steam quality.

To guarantee a perfectly balanced climate inside the cooking chamber, Giorik has patented a unique humidity control system (Meteo System) using software that analyses the relevant parameters in the cooking chamber and then regulates the production of steam or discharges excess humidity.
